

## DM74LS157/DM74LS158

### Quad 2-Line to 1-Line Data Selectors/Multiplexers

#### General Description

These data selectors/multiplexers contain inverters and drivers to supply full on-chip data selection to the four output gates. A separate strobe input is provided. A 4-bit word is selected from one of two sources and is routed to the four outputs. The LS157 presents true data whereas the LS158 presents inverted data to minimize propagation delay time.

#### Applications

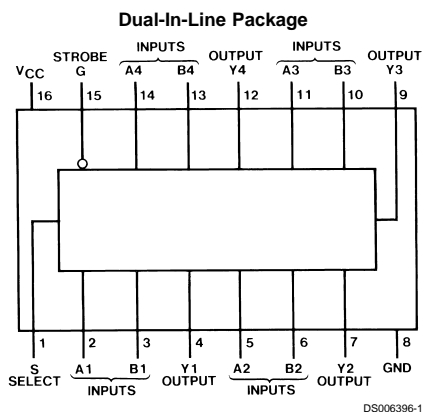

- Expand any data input point
- Multiplex dual data buses
- Generate four functions of two variables (one variable is common)

- Source programmable counters

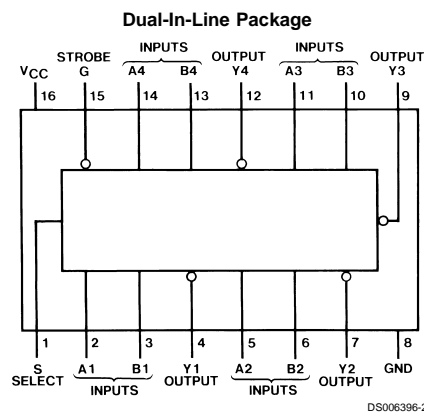

#### Features

- Buffered inputs and outputs
- Typical Propagation Time
  - LS157 9 ns
  - LS158 7 ns
- Typical Power Dissipation
  - LS157 49 mW
  - LS158 24 mW

**Note 1:** The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
